STYLUS RMX WORKSHOP

General Information

This workshop is based on Spectrasonics' Stylus RMX; this is a sound module or instrument with almost no limitations and which is commonly used by most industry professionals today. The course explains and illustrates all the most useful features of the instrument. It is the most powerful of the Spectrasonics' fantastic software based instrument range. It is one of our most popular workshops and a must for any serious studio enthusiast. As is the case with our [Reason Workshop](#), this piece of software is sufficient for making top quality audio productions all on its own, provided the user knows all off its user friendly features. It has many of its own remarkable build-in FX'S processors which are all commonly used in today's music productions. Check out the reviews and forums on <http://www.spectrasonics.net/> to understand which big names are using it and exactly how powerful the program is. It is Plug-in, which can be used in most modern day sequencers. Some producers are currently using Stylus RMX only for all their productions as it is a great tool for remixing and adding sounds and loops into your production on the fly.

Costs

In-House Prac Option R2,400 Special Price R1,699

Timetable

These twenty-four hours of theory & practical class can be done in six four-hour, sessions over six weeks. Normally, our students come in for four hours at a time, two hours for theory and two hours for practical.

We recommend that each student attends the six theory and practical classes of the course over six consecutive weeks. Experience has shown us that learning to use Spectrasonics' Stylus RMX at this pace allows just enough time for the student to practice and absorb the information received in each class.
